Hospice at Home (H@H) services provide patients with choice about where they receive their care at the end of life, which is central to UK policy. The number of people expressing a wish to die at home is increasing. At present health and social care services are ill equipped to meet this demand.

There is wide variation across the country in H@H service provision. Services that have been evaluated often demonstrate positive benefits for patients. It is unclear what elements of these services deliver which outcomes and what role other primary care and community services play.

This project has produced a comprehensive map of the range and variation of H@H services in England.
