Notes: 1. Numbers in parentheses are standard errors.

2. For exact wording of questions and coding of variables, see Appendix 1.

3. In this table and all following tables, we report odds ratios and standard errors (in brackets), statistical significance of each coefficient, and overall model fit. Odds ratios less than 1 indicate that the given independent variables reduces the odds of the outcome. For example, not having a university education reduces the odds of being accepting to TCs as neighbours. Odds ratios greater than 1 means that the given independent variable increases the odds of the outcome. For example, the odds of males being more accepting of cohabitation is 1.6 times that of females.
