Call to Service: The Register of Australian Accountants for National Service 1940-1944

Abstract

Purpose – The paper explores the creation in Australia of the Register of Accountants for National Service. Established at the outset of World War 2, the Register operated for four years from June 1940 providing voluntary, non-remunerated, part-time and after-hours services to a highly stressed and seriously stretched Federal Government bureaucracy by members of the main Australian professional accounting bodies. Departments of the Navy, Army, Air Force, Supply and Development and Munitions were the largest consumers of the services offered.

Design/methodology/approach – The study of the Register relies mainly on an extensive archive of war-time documentation from the Federal Government and various accounting professional institutes which has survived, predominantly in the National Archives of Australia. The resource is particularly rich in material covering the complex negotiation processes that brought the Register into operation together with documentation recording and reporting the work of the Register. The themes of professionalization, institutional legitimacy, volunteerism and patriotism are all invoked to explain the presence of the Register in the machinery of government that was assembled to deliver the ultimately successful war effort. Created by the principal professional accounting institutes, the Register attests to the commitment of their members to the war effort and, thereby, the importance of the profession to Australian society.

Research limitations/implications – Discussion focusses only on Australia where the Register was unique. No other examples have been discovered where a profession has self-mobilised to serve a nation in a time of war. A further limitation is that the activities reported are restricted to self-reporting by the Register and a small loose collection of documents prepared by the Department of the Navy.

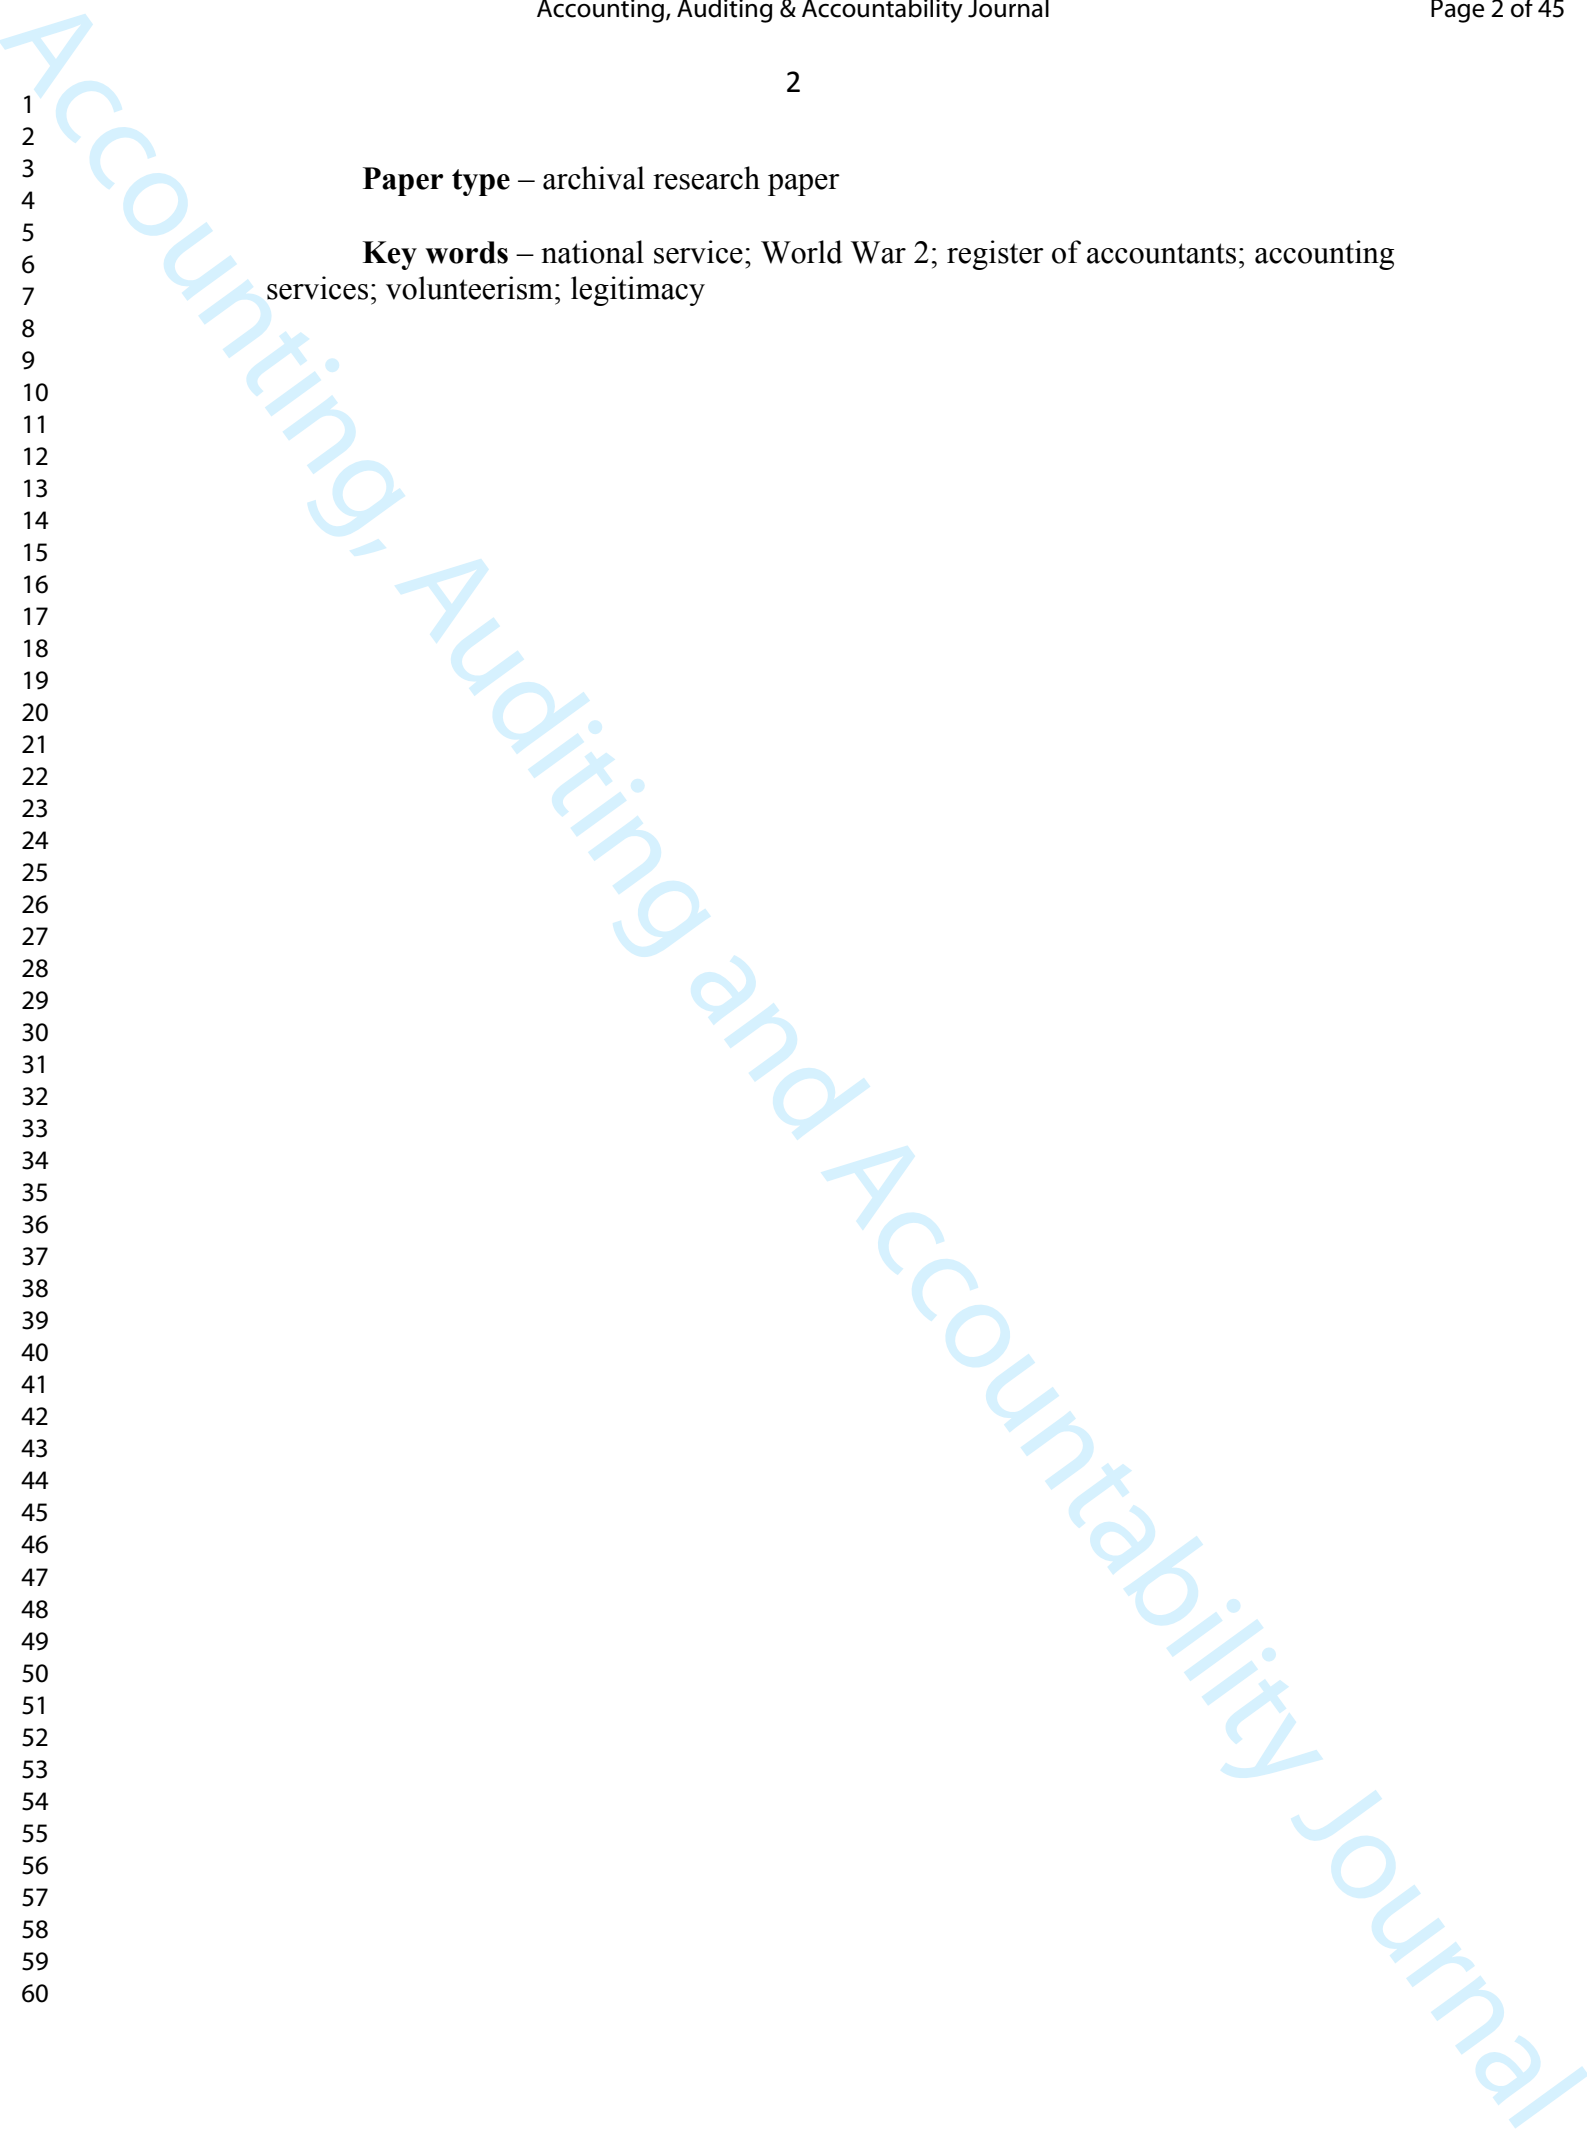

Findings – The perilous situation of Australia at a time of war provided a compelling incentive for the accounting profession to organise itself in an efficient and highly effective manner to assist with the war effort. The disparate and somewhat fractured accounting profession at the time was able to work together in a structured, cohesive and disciplined manner to provide voluntary services when called upon. To deliver the voluntary services promised, a purpose-built set of institutional arrangements was put in place. An extensive inventory of the potential services that could be provided by members of the main professional accounting bodies was conducted to facilitate the smooth matching of government needs with services available.

Originality/value – The uniqueness of the Register is the core of the originality and value of this study. How and why it came into being and the method by which it completed the ‘task’ assigned to it stand as testament to a profession strategically placed to contribute in a substantive manner to the war effort at minimal cost to the nation.

Paper type – archival research paper

Key words – national service; World War 2; register of accountants; accounting services; volunteerism; legitimacy

In July 1940 in response to the outbreak of war a register was created of Australian accountants who were members of the principal professional accounting bodies that constituted a form of national service. Officially designated as the Central Register of Accountants (hereafter the Register), the Register was created to provide the Australian Federal Government [1] with access to voluntary, unremunerated contributions from accountants. The initiative that became the Register was formalised on 1 July 1940 at a conference between senior representatives of the five principal accounting institutes and high-ranking officials of Federal Government departments [2] directly involved in the war effort. The Register was unique in that it is the only initiative discovered where a profession has been formally self-mobilised in the service of a nation during wartime [3]. Efforts in Great Britain during World War 2, for example, were made to manage the supply of accounting manpower through government sponsored agencies but not in the highly organised manner initiated by professional bodies that occurred in Australia (Armstrong 1987; Matthews et al., 1998). Volunteers on the Register were deployed to relieve pressure on government departments and improve efficiency of operations to meet the needs of a war-based economy. After a very active engagement by the Register with government departments in the early years of the war, contributions gradually reduced as departments became more able to contend with the exigencies of the war economy.

55
56
57
58
59
60

The successful establishment and operation of the Register as an instrument in the war effort between 1940 and 1944 confirmed that accounting practitioners had been not only able to navigate the professionalization process over many decades and emerge with the relevant

attributes of a profession but, most especially, they had achieved a level of legitimacy within society that was critical to gaining the confidence of government in support of the initiative (Ashforth and Gibbs, 1990; Suchman, 1995). This legitimacy enabled the accounting profession to initiate action at a time of national crisis that would ultimately further enhance its standing in the eyes of the public. Grant's (2011, p.28) observation of World War 1 that 'the voluntary effort at home to support the men at the front ... remains a phenomenon about which little has been written' is particularly apposite when applied to the Australian accounting profession in the context of World War 2. While a few fleeting references to the Register are included in institutional histories (Australian Society of Accountants, 1962; Graham, 1978; Marshall, 1978; Linn, 1996), there is no mention of the Register in either the histories of the major accounting firms (Falkus, 1993; Armitage, 1995; Abrahams, 2001) or in the semi-official histories of Australia during World War 2 (Hasluck, 1952; Butlin, 1955; Butlin and Schedvin, 1977). The present study is the first to identify how the contributions of accounting in the management of war efforts during World War 2 were able to be strengthened by creating a professional body which would be able to enlist most advantageously these contributions.

The association between accounting and war has been attracting a growing interest by accounting researchers (Cobbin and Burrows, 2018; Chwastiak 2008, 2013; Funnell and Chwastiak, 2007). In this work the overwhelming focus is on the UK and to a lesser extent the US [4] and World War 1 and World War 2. Other literature in this genre extends from the Venice Arsenal of the late 16th century (Zan, 2004; Zambon and Zan, 2007) to the more contemporary times of the Gulf War 2 [5] (Chwastiak 2008, 2013). The emphasis has been primarily on seeking understandings of how accounting enables the state to maintain military forces through constitutional, political and financial controls in times of peace and war. Financial controls not only manifest themselves with procurement of war materials from third parties by the military but also a willingness to embrace and adopt contemporary business technologies and practices (Miley and Read, 2012). The significant presence given to World War 2 in the literature has been mainly concerned with the impact of war on costing, particularly the manufacture of munitions (Fagerberg 1990; Fleischman and Marquette, 2003; Djatej and Sarikas, 2009; Cinquini et al., 2016) and the vexed question of efficiency in the procurement and supply of men and materiel (Tyson and Fleischman, 2006; Cobbin, 2009; Miley and Read, 2012; Djatej and Sarikas, 2009). A small number of studies have taken a critical view to implicate accounting in the promotion and sustaining of war-like activities. In particular a charge of culpability is levelled at the accounting discipline for its role in the

1
2
3 perpetration of the Holocaust (Funnell, 1998; Lippman and Wilson, 2007) and the forced
4 internment of Japanese-American citizens by the US government during World War 2 (Tyson
5 and Fleischman, 2006).

7

8 This study draws on an extensive archive of primary source material preserved by the
9 National Archives of Australia. Documents from the departments of Defence, Defence Co-
10 ordination, Supply and Development, Army, Navy and Air are particularly relevant. Copies
11 of reporting activities carried out by the General Registrar of the Register and the Department
12 of the Navy are also retained by the National Archives of Australia. Evidence is also drawn
13 from minutes of meetings of the General Council and Executive and National Committees of
14 the various accountancy institutes involved with the Register. Details of the specific nature
15 and extent of voluntary services provided by the Register are found in periodic reports by the
16 Register and government departments. The final and most extensive reporting by the Register
17 came at the end of the first year of operations in June 1941. As activity levels declined and
18 the nature of the work changed in later years, the commitment to reporting similarly
19 declined.

29 The next section of the paper provides an overview of the importance of legitimacy in
30 the emergence of accounting as a profession in the middle of the 20th century and how this
31 ensured that the offer of service by the main accounting professional bodies was
32 unhesitatingly embraced by the Federal Government. This is followed by an examination,
33 invoking notions of altruism, legitimacy-seeking, volunteerism and patriotism, of how an
34 unusual and unique initiative such as the Register developed into an organization of
35 considerable benefit to the war effort. The operations of the Register from its creation in July
36 1940 until its closure in late-1944 are then discussed, followed by an assessment of the
37 contribution made by those who volunteered their services.

46 **Professional legitimacy and the advent of war**

47 The pathway to professional status for the accounting discipline in Australia and its
48 standing and legitimacy in the eyes of the Australian Government were inextricably linked to
49 the progress achieved in Great Britain from Victorian times, where the first professional
50 association, the Society of Accountants in Edinburgh, was established in 1854, and in the
51 United States in 1887 with the formation of the American Association of Accountants. In
52 Australia the first professional body of accountants was the Adelaide Society of Accountants,
53 in the state of South Australia, established in 1885. In each jurisdiction the founding of
54 accounting institutes was not only critical in the development of the discipline but also the
55
56
57
58

3 crucible from which professional status was achieved, whereby the practitioners were
4 accorded a high standing in society. At the outbreak of hostilities in 1939 the accounting
5 profession in Australia was represented according to membership numbers, as shown in
6 Table 1 below, by five principal accounting institutes and five minor institutes.

12
13 The process and related strategies by which occupations achieve professional status
14 with related social and economic advantages has been debated, albeit inconclusively, at some
15 length in the sociology of the professions literature. The amalgam of competing hypotheses
16 and the extant research into professions and professionalisation is, as described by Meiksins
17 and Watson (1989, p. 561), one with 'no single theory of the professions; rather, there are
18 competing theories, no one of which has become completely hegemonic'. Meiksins and
19 Watson (1989, p. 561) further observe that the 'most notable characteristic of this
20 sociological research on professions ... is dissensus'. To navigate these competing theories,
21 Willmott (1986) adopts a taxonomic approach that encapsulates three widely adopted
22 theoretical genres; functionalist, interactionist and critical. Each approach gives a clear
23 presence but a different emphasis or precedence to altruistic motives and recognises that,
24 irrespective of the suggested primary motivations for gaining professional status, ultimately
25 there will be benefits to members, both social and economic, that may not otherwise have
26 been possible.
27
28
29
30
31
32
33
34
35
36

37 Drawing on a number of theorists [6], Willmott (1986) suggests that the functionalist
38 viewpoint emphasises that a group of practitioners accorded the status of a 'profession' who
39 are in possession of expertise and knowledge and who give a priority to maintaining
40 independence, a commitment to altruism and a sense of self-discipline, will apply these traits
41 to facilitate the smooth operation and functioning of society in which they are a part.
42 However, the profession offers these attributes in exchange for high levels of prestige and
43 other rewards. The interactionist understanding of professions, suggests Willmott (1986), is
44 more focussed on the notion that professions carry out an occupational role in concert with
45 their clients and colleagues that is crucial to establishing and maintaining the claim to
46 professional status, which the interactionists conclude will justify better rewards. This view
47 further asserts that members of the profession will exert deft political skills to retain
48 legitimacy and standing in society that comes with professional status. Finally, the critical
49 perspective asserts that members of the profession adopt a more mercenary approach to
50 establish professional credentials consistent with a capitalist society. Invoking Weberian and
51
52
53
54
55
56
57
58
59
60

1
2
3 Marxist ideology, the critical theorists according to Willmott (1988) suggest aspiring
4 professions are fixated on achieving social status and the financial advantages that this will
5 make possible by using the authority of their specialist knowledge to gain hegemony over an
6 occupational domain. Notions of closure, exclusion, control, and solidarity abound within this
7 domain.
8
9
10

11
12 In the theoretical approaches identified by Willmott, each of which encompasses in
13 different measures the same key elements, professionalisation will not be motivated by one,
14 all-encompassing aim. While there are differences between these understandings of what
15 might be the primary motivations of particular occupational groups in seeking professional
16 status, there is one important constant in the justifications that they provide; specialist, expert
17 knowledge. West (1996, p. 82) observes that specialist knowledge as the common thread in
18 the different theoretical understandings of professionalisation 'is persistently identified as
19 either a benign but distinguishing trait of professions or, in the more critically inspired
20 literature, the primary source of professional power'. Accordingly, a different priority is
21 accorded to the relevance of specialist knowledge; whether in an altruistic sense, primarily
22 allowing high quality service to clients and society, or for using the status that this provides
23 for personal financial gain.
24
25
26
27
28
29
30
31
32

33 Irrespective of the suggested priorities of professional bodies, achievement of these on
34 behalf of their members will depend upon these being consistent with the needs and
35 expectations of the social and economic environment in which members provide their
36 services. Recognition of the legitimacy of professional bodies and their members is
37 'dependent upon the good will (sic) and tolerance of the society of which they [professions]
38 are a part' (Van Maanen and Barley, 1984, p. 318). Professions need to be constantly alert to
39 and 'eternally vigilant' (Macdonald 1995, p. 204) of the need to work assiduously to retain
40 standing. This has been clearly demonstrated with accounting professionals during times of
41 major financial crises, such as during the Great Depression in the 1930's and the Financial
42 Crisis of 2008, when accounting professionals were expected to take a leading role in
43 restoring the financial well-being of not just individual private businesses but also that of the
44 Nation itself. The present study shows that this association assumed even greater importance
45 at a time of war with the creation of the Register. At a time of extreme national crisis, a time
46 of war when the very survival of the Nation was threatened, less selfish, altruistic motivations
47 for the accounting profession's commitment to the war effort were to be given an
48 unquestioned priority. Thus, while ultimately achieving professional status may bring with it
49 many advantages to members of professional bodies, this was not the reason for the creation
50
51
52
53
54
55
56
57
58
59
60

of the Register. This was clearly recognised when preparations for the Register began very soon after the declaration of war and the Australian Government's 'all-in' policy was proclaimed with the need to begin immediate preparations to defend the country.

The institutes listed earlier in Table 1 were the legatees of a long and sometimes difficult evolutionary journey that many occupations have been confronted with as they strove to achieve professional status. Poullaos (1994, p. 219) has described the Australian experience as having been 'born of struggle and compromise, not to mention dangerous and difficult liaisons'. In the case of Australian accounting, half a century of mergers, amalgamations, takeovers and cessations among accounting practitioners had delivered a profession that was widely recognised as 'a legitimate organisation ... worthy, meaningful, predictable and trustworthy' (Suchman, 1995, p. 575), and thus well placed to make a substantive and, what Loft (1986) has described as, a constitutive contribution to the war effort if the circumstances permitted. The opportunity for, and capacity of, any assemblage of persons to successfully self-mobilise and serve in the national interest at a time of national emergency is predicated on two factors: an ability to set aside any enduring differences between constitutive bodies, and an established highly regarded reputation and standing with government, within the business community and the wider society.

Within the Australian accounting profession, long-standing internecine rivalries and residual resentments dating from the early years of the 20th century characterised by three attempts to obtain a highly prestigious Royal Charter (Poullaos, 1994) [7] initially cast doubt on the capacity of the profession to make a collective, sustained contribution. However, despite these enduring differences, accountants had established a well-recognised professional standing and were integrated within the commercial and social fabric of the Nation (Lee, 1995). Therefore, as 'a powerful sector of the modern economy' (Lee, 1995, p. 64), they were in a strategically strong position to contribute to the war effort. Loft (1986, p. 137) argues that in the decades prior to World War 2 the accounting profession had 'come to play an important role in the working of modern society' and according to Burchell et al., (1980, p. 8) it had 'become an identifiable form of organizational and social practice'. This identity was the basis upon which the principal accounting professional institutes were able to offer successfully, their services to the Nation.

At the time that the professional bodies were offering the services of their members, the government was in the process of moving from a peacetime economy to a wartime economy. This transformation brought with it considerable challenges for government departments, particularly those in the defence realm, to improve efficiency in the delivery of men and

1
2
3 materiel for the war effort. The legacy of the World War 1 efficiency scandals in the UK
4 (Funnell 2005, 2006) and the exigencies of the new war accentuated the need to make this
5 shift as quick and efficient as possible. Within the senior ranks of the defence bureaucracy
6 the co-ordinated offer from the accounting profession came at an opportune time for they
7 foresaw the opportunity to access a significant store of knowledge and competency possessed
8 by the members of the profession. The government recognised that this significant 'body of
9 specialist knowledge' (Carr-Saunders and Wilson, 1933, p. 307) or 'expert labour' (Abbott,
10 1988) could be readily and usefully deployed to ease this crucial transformation to a state of
11 war. Government officials knew that they had a critical asset at their disposal without the
12 need to divert urgently needed resources to organise the expertise needed. That the
13 government was ready and willing to engage suggests it was not only acknowledging the
14 standing of accounting as a profession but that it had every confidence the profession could
15 deliver on the promises made.
16
17
18
19
20
21
22
23
24

25
26 Delivering the knowledge and competence base to government in the manner proposed
27 enabled the profession to establish itself as a willing participant prepared to deliver selflessly
28 any necessary services to the Nation. Although ultimately this would further consolidate and
29 build on the standing and legitimacy that had already been achieved by the accounting
30 profession, at a time when the Nation was fighting for its very survival the nature of the
31 services provided and the close working relationship established with the relevant
32 government departments confirmed that less altruistic intentions were not the primary
33 motivation of the offer by the principal accounting institutes. The majority of services were to
34 be delivered entirely out of business hours in members own time, located usually in secure
35 premises with attendant security requirements, and provided on a *pro bono* basis at no cost to
36 the government. As such, all participating members were sacrificing their own time in the
37 interests of the Nation.
38
39
40
41
42
43
44
45

46
47 In the format that services were given as specified by the profession, the Register also
48 provided a strategic advantage in that it provided a means of assistance that would not be
49 constrained and denied the best possible contribution by strictures that were likely to be
50 introduced if (and when) the government moved to introduce wartime regulation of the
51 supply and management of all manpower resources, including accounting. Given that
52 accounting as a discipline is complex (Burchell et al., 1980; Lee 1990), fragmented and
53 diverse (Horovitz 1980 as cited by Hopwood 1983; Burchell et al., 1980; and Sikka and
54 Willmott 1995), a specific-purpose institutional mechanism designed located and managed by
55 those well acquainted with the associated specialist knowledge could arguably maximise the
56
57
58
59
60

effectiveness and efficiency with which government might utilise the services on offer. In recognition of the apparent regard in which the accounting profession was held by government and acknowledging the complexity that was accounting, the government chose to cede entirely to the profession via the Register the co-ordination of the potential contributions of accountants in the interests of the war effort. It chose to take the exceptional measure of using the Register rather than the Directorate of Manpower in the Department of Defence Co-ordination that was ostensibly tasked to manage 'all' manpower resources in the economy on behalf of government. Once the confidence of government was assured and the decision was taken to proceed and that services would be overwhelmingly provided without charge, the opportunity was then available for the profession to put in place suggested institutional arrangements that were entirely consistent with societal expectations of professions by enlisting the higher-level characteristics of altruism, service and responsibility (Dowling and Pfeffer, 1975, paraphrased in Ashforth and Gibbs, 1990). This also potentially would maintain and extend the legitimacy already achieved (Ashforth and Gibbs, 1990).

Formation of the Register

The Register had its genesis in efforts by the Commonwealth Institute of Accountants [8] in December 1938 to signal at a time of growing uncertainty in Europe and Asia its unconditional 'willingness to cooperate with government to the fullest extent possible', following an indication by the government that it wanted to strengthen the defence services (S.W. Griffith, President, Commonwealth Institute of Accountants to J.A. Lyons, Prime Minister, Letter, 1 December 1938, NAA: A664 524/402/590 524/402/32). Despite support at the highest level, the proposal did not proceed and lapsed for the next eighteen months, to be overtaken by the outbreak of war. In the wake of a broadcast to the Nation on Sunday, 16 June 1940, in which the Australian prime minister R.G. Menzies extolled the virtue of the government's 'all-in' policy, the Commonwealth Institute of Accountants resurrected the idea of a co-ordinated effort by the accounting profession to assist the government. In acknowledgement of the social and political standing of the accountancy profession, the offer was accepted immediately with liaison responsibility passing to the Department of Defence Co-ordination and its fabled secretary F.G. Shedden (Horner, 2000) who recommended a centralized arrangement so that departments could draw help through a single agency. The accounting profession was to be the only profession during the war in Australia to create a body to marshal and co-ordinate the services which were provided by its members. Extensive contributions to the war effort were consistently made by members of other professions, such

1
2
3 as engineers and medical practitioners, but not as part of a broad initiative by their relevant
4 professional bodies.
5

6 The Register of Australian Accountants for National Service was formed on Monday,
7 1 July 1940 at the Department of Defence Co-ordination offices, Victoria Barracks,
8 Melbourne, at which officials from government departments [9] and the main accounting
9 institutes [10] attended. The task of chairing the gathering devolved upon a leading
10 Melbourne-based chartered accountant, E.V. Nixon, who was highly regarded in government
11 circles. Nixon, having been appointed Director of Finance in the newly created Ministry of
12 Munitions, had recently relinquished chairmanship of the earlier disbanded Advisory
13 Accountancy Panel in the Department of Supply and Development which had been
14 established 'to advise on a scheme of costing and profit control for the production of
15 munitions by private industry in an emergency' (Cobbin and Burrows, 2019). Acquainted
16 personally with the prime minister R.G. Menzies, Nixon chaired the conference as the prime
17 minister's personal representative delivering a prime-ministerial letter of commendation of
18 the profession and the initiative (R.G. Menzies, Prime-Minister to The President of the
19 Commonwealth Institute of Accountants, June 22nd 1940, NAA: A1608 R31/1/1). The
20 minutes of the meeting indicate that the focus was the creation of a general scheme confined
21 to the five largest, and therefore principal, professional accounting institutes which were the
22 participating bodies, excluding the five minor institutes (Minutes of Meeting of Presidents
23 and Registrars of Accountancy Institutes held on Monday 1st July 1094, NAA: MP504
24 236/702/104).

30
31
32
33
34
35
36
37
38

39 The decision to engage with the five main accounting associations had its genesis in
40 the earlier decision to appoint the Accountancy Panel in the Department of Supply and
41 Development. F.G. Shedden, Secretary of the (then) Department of Defence, where the panel
42 was initially proposed before the establishment of the Department of Supply and
43 Development, had sought advice about the standing of the various accountancy bodies in a
44 series of personal communications with a long-time friend H.J. Trist of H.J. Trist and
45 Stranger, Chartered Accountants, Sydney, between December 1938 and February 1939. They
46 eventually settled on the five institutes with the largest membership, and thus most extensive
47 reach and penetration in Australian business. These institutes, which the government referred
48 to as the 'principal' institutes, were subsequently invited to nominate members to the panel in
49 March 1939 [11].
50
51
52
53
54
55
56
57

58 A Central Committee created for the Register, composed of the presidents of the five
59 principal institutes, formed the national coordinating body. C.W. Andersen, National
60

Registrar of the Commonwealth Institute of Accountants, was appointed General Registrar with overall national administrative responsibility. Committees and registrars were established in each state and several tasks were identified for immediate action:

- (i) preparation of a working constitution,
- (ii) conduct a survey of members' readiness to serve,
- (iii) preparation of a Classification of Accountancy Services and,
- (iv) design of a system to record the services that members could provide.

While no formal title was given to the Register's constitution it was referred to as the Plan of Organisation. Conduct of the survey was the responsibility of the Central Committee, with the compilation of registers to be undertaken by each of the Registrars appointed in each state. A letter explaining the initiative was prepared in the names of the five participating institutes and sent to all members with the signature of each of their presidents on the Central Committee. Documents were modified to reflect local characteristics and to engender a sense of local association. The letter exhorted involvement and advised that 'Government departments are finding it increasingly difficult to cope with the growing volume of accounting work. Accountants ... can give valuable assistance in the present national emergency by making their services available' (Circular, National Service, undated, NAA: A663 O130/2/574). The questionnaire accompanying the letter was laid out in three sections covering General Information, Honorary Services and Remunerated Services. Initially designed to ascertain availability for service, it also sought specifics of experience in the accounting and auditing fields. A copy of the questionnaire is shown below as Figure 1.

Figure 1 about here

The brief given to the Register by the government encompassed three service options : high level consultancy, location-specific support and full-time personnel placement. The first, which was mainly for a select number of senior members of the profession, was to undertake work of an administrative, advisory or consultative nature. Although no elaboration was provided, the structure of a questionnaire suggests that this service was likely to be fee-for-service [12]. The second service option, the main focus of the Register, was directed to all members able to offer honorary services of a general accountancy or auditing nature. Initially tasks were likely to be relatively low-level and repetitive, including checking or general assistance in accounting but more complex tasks emerged in due course. This type of service could be rendered during the daytime but was more likely to be rendered in the

1
2
3 evening, depending on members' availability. The third option, which was for those able to
4 take up full-time remunerated service, required a different level of commitment. In this latter
5 option members of the five principal accounting institutes who had special knowledge of cost
6 accounting, factory organization and management were targeted. Demand was expected to be
7 limited as recruiting was restricted to the Department of Supply and Development and the
8 Ministry of Munitions and salaries were unlikely to be commensurate with those paid in
9 private industry. Thus, it can be seen that those who would leave any present employment to
10 undertake these positions were making a decision that was mainly altruistically motivated; a
11 desire to serve their nation in its time of need by responding 'generously to the call for
12 national service' (Anon., 1941, p. 449). The second form of service listed provided the basis
13 for the reports prepared by the Register. On-going maintenance and advancement of the
14 national Register was also vested in local officials drawn from the contributing institutes who
15 were expected to establish lines of communication with government departments.

16
17 The next major task was the preparation of a Classification of Accounting Services
18 (hereafter Classification) to facilitate matching and allocation of expertise and experience to
19 the needs in government departments. The Classification, which is replicated in Appendix I,
20 was the means to inform government departments of services available. Developed in two
21 stages, it initially identified Primary Classes of services followed by a series of Secondary
22 Classes within each Primary Class. Eleven Primary Classes of accounting services as
23 identified by the Register (see Part A of Appendix I) were categorised along industry sector
24 lines. Primary Classes 1 and 2 were mainly reserved for members either practicing in or
25 employed by accounting firms. Primary Class 1 - Administrative and Consultative, was
26 reserved for senior practitioners and senior accounting executives in commerce who were
27 judged to have exceptional experience and ability in their fields of expertise. If the detail
28 provided by members did not match the expectations of Class 1 they were classed as Primary
29 Class 2 - General Accountancy and Auditing. The majority of members placed in Primary
30 Class 2 were drawn from the middle and junior ranks of accounting firms but it also served as
31 a catch-all for members who did not qualify under any of the remaining Primary Classes.
32 Primary Classes 3 to 5 related to secondary industries, Class 6 to primary industries and
33 Classes 7 to 10 tertiary industries. Class 11 covered those in government and municipal
34 service. Limitations associated with the Primary classes became apparent very early during
35 the processing of over 1,000 Victorian member registrations. To alleviate the problem an
36 additional 74 mutually exclusive sub-classifications called Secondary Classes were identified
37 for Primary Classes 3 to 10. These are listed under Part B of Appendix I. As Primary Class

3 11 was restricted to public servants and municipal officers who were deemed not to be
4 engaged in specialised work, no Secondary Classes were identified.
5

6
7 There is no evidence that members of the Committee based their work on any pre-
8 existing classification or taxonomy, although they may have drawn inspiration from some
9 existing material as suggested by a brief comment in a Note to Secondary Class 3,
10 Engineering. The note states that 'This classification embraces work of a highly specialized
11 character. The fabrication of iron and steel is embraced by [Secondary] Class 5 (5) (See
12 Commonwealth Year-Book 1939, page 735)'. In a time of emergency and when expediency
13 was necessary, the Committee used the Classification to bring the Register to an operational
14 level in a timely manner. The Classification was neither definitive nor exhaustive as gaps are
15 observable in the numbering system to make provision for possible expansion but there is no
16 evidence to suggest that they were used. This is the only known occasion of a large-scale
17 effort to catalogue the skill base in the accounting profession.
18
19
20
21
22
23
24

25
26 The Committee recognised from an early stage the need for a system that would
27 easily match expertise with need. This expectation was met via a single-sheet Visible Record
28 System which was a machine-printed document manually prepared for each submission to
29 the Committee by a stenographer after the completed questionnaires had been coded. The
30 Visible Record System sheet (see Figure 2) was laid out with demographic detail on the first
31 four lines together with Primary / Secondary classes from the Classification. Brief career-to-
32 date detail followed together with any specialist experience of Costing (denoted C) and / or
33 Machine Accounting (denoted M). Details of the industry(ies) in which the costing
34 experience had been gained were also sought. The final line of the sheet recorded additional
35 demographic data, availability of members for service and the nature of service available
36 according to the Classification. Colour-coded metal clips were also attached to the base of the
37 card to facilitate identification of relevant personnel.

50
51 When the Register was brought to an operational level, promotion of resources
52 available was initiated by Shedden. Tactfully referring to the long hours being worked by
53 department officials and the amount of overtime accruing, he let it be known throughout the
54 defence realm that there was a pool of qualified accountants ready to give honorary service
55 (NAA: MP508 236/720/104 S236/702/86). The chance to alleviate overtime and other
56 pressures on government departments was obvious but Shedden was also acutely aware of the
57
58
59
60

1
2
3 natural caution of public servants and the misgivings many held with engaging outsiders in
4 the business of government. To encourage colleagues Shedden invoked the earlier-mentioned
5 prime-ministerial endorsement along with some micro-level advice as to how voluntary
6 accounting services might be usefully deployed. Typical tasks suggested by Shedden are
7 listed in Table 2 below:

14
15
16

17 **The Register's first year – July 1940 to June 1941**

18
19 An extensive 25-page compilation report was produced by the Register for the first
20 full year of operations, 1 July 1940 to 30 June 1941, including analysis across all states,
21 departments and branches (Central Register of Accountants – Report of Voluntary Services
22 to 30 June 1941 (One Year), NAA: A5954 371/1 and A663 0130/2/699). In a note appended
23 to the report, the General Registrar recorded unequivocally that accountants on the Register
24 who 'responded generously to the call for national service' were 'making a substantial
25 contribution to the war effort' (Anon., 1941, p. 449). Andersen also conveyed the view to
26 Shedden that 'the decision to establish the Register has justified itself beyond expectations'
27 (C.W. Andersen, Secretary, Central Register of Accountants to F.G. Shedden, Secretary
28 Department of Defence Co-ordination, Letter, 19 September 1941, NAA: A5954 371/1
29 O184/1/93). Extolling the virtue of, and foresight in, developing the Classification, the report
30 also pointed to the ability of the Register to meet the needs of departments by matching
31 expertise to task. This, the only report prepared, covered a period of constantly expanding
32 activity and the greatest level of combined engagement by the accounting profession during
33 the war. Composed of three parts, it included detail of the number of accountants registered,
34 honorary service provided, costs incurred by the Commonwealth Institute of Accountants
35 together with nation-wide summaries of work-in-progress and work completed. State-by-state
36 and department/branch breakdowns were also included. The extent of the spread of
37 registrations and the quantum of services delivered are summarized in Table 3 below.

Table 4 about here

More than 31,000 voluntary hours were provided on completed work in the first year with activity reported in most states, across several departments, and different defence branches [14]. The state-by-state breakdown in Table 4, Panel A, shows the greatest usage of the service was in Victoria, accounting for 49% of work completed, while 27% was completed in Western Australia, 20% in NSW and 4% in South Australia. South Australian usage was particularly low, reflecting a concern expressed by the Deputy Director of Volunteer Service in that state to Defence Co-ordination in Melbourne that indicated 'Departments here fail to use the voluntary help available' (Deputy Director of Voluntary Services, Department of Defence Co-ordination, Adelaide to Director of Voluntary Services, Department of Defence Co-ordination, Melbourne, Memo, 19 November 1941. NAA: A663 O130/2/699). Thus, offers of service had been made but not all had been able to be implemented. The primacy of Victoria in the statistics is not surprising as the headquarters of all major defence-related departments were located in Melbourne, the capital city of Victoria. Victoria was also the main location of the manufacturing industry in Australia and most of the government munitions manufacturing facilities were also in the State. The Department of Army and Army Headquarters were also located at Victoria Barracks, Melbourne.

The spread in the usage of services provided by the Register was also reported in two additional ways. A summary of hours worked in certain departments, which is shown in Table 4, Panel B, confirms that in the first year the Department of Army accounted for the overwhelming proportion. At its peak the Register was servicing facilities on at least 44 air stations in all states except Tasmania. Branches of the armed services that utilised the Register are shown in Table 4, Panel C. Ordnance Branch and Finance Branch, including Treasury and Pay, accounted for most of the hours consumed. Within the Department of Army, Ordnance Branch 3rd Military District (3MD) and the Master-General of the Ordnance 3MD consumed 10,236 hours alone whilst the 2nd Australian Imperial Force Section of the

District Finance Office (DFO) and Finance Branch, also at 3MD, consumed an additional 3,462 hours. In New South Wales the DFO in the 2nd Military District consumed more than 4,000 hours and the respective office in Western Australia (5th Military District) accounted for nearly 5,000 hours. In total, more than 80% of all service reported in the first full year of operations was consumed by these four branches, all within Army.

For the months immediately following the report for the first year of the Register, ongoing commitment was evidenced through work-in-progress. The expected delivery of services reflected the patterns that had been established in the first year as shown in Table 5 below.

Table 5 about here

Table 5 indicates that as at 30 June 1941 there was an ongoing commitment to deliver 1,866 hours of service per week related to work that was currently in progress. If this were extrapolated to a full 52-week year a further 97,000 hours would have been delivered. However, this was not the reality for by the end of 1941 the services on offer by the Register and delivered were being scaled back significantly. There is also no formal reporting of service delivery in this period. As far as ongoing work in progress was concerned, as expected Victoria accounted for the largest number of hours with smaller contributions distributed unevenly over each of the other states (Table 5, Panel A). Dissection by department indicates again that the Army was the major consumer (Panel B). Ordnance, Finance and Aircraft Production were the major consumers of the services at the branch level (Panel C).

While the report for the first year of the Register provides an indication of the quantum and range of activities, a micro-level appreciation of the work assigned and duties undertaken by volunteers can be obtained from the General Registrar's descriptions in the report, a full listing of which is included in Appendix II. The listing reveals the extraordinary breadth of tasks performed. Some tasks were self-explanatory but in other cases there was less clarity. Procedures, documents or terminology would have been familiar only to those working within relevant areas of government.

The evolving role of the Register post July 1941

As the war progressed a second conference was scheduled for 21 November 1941 [15] with the surviving minutes portraying an organisation about to go through significant transition. Despite an unwavering commitment to the war, by late-1941 the level of voluntary

1
2
3 service provided was adversely affecting the functioning of the accounting profession
4 nationwide. In addition, there were significant consequences for the Register and the wider
5 accounting community with the enlistment of accountants in the forces, two weeks
6 attendance at Universal Training Camps, and the placement of qualified personnel into
7 various governmental and service departments. From the outbreak of hostilities the
8 profession had to contend with a constant stream of members enlisting for active or home
9 service. Although this had not been part of the original brief given the Register, willingness
10 to enlist placed great strain on the wider profession. Concurrently a second movement of non-
11 conscripted [16] yet to enlist members into fulltime, remunerated, civilian government
12 service consistent with the third element of the initial brief, significantly exacerbated the
13 strain. At the same time, the profession was starting to encounter issues with delivery of
14 services. The reality at the departmental level was that considerable advancement had been
15 made in bringing the economy and bureaucracy onto a full functioning war-footing.

16
17 The potential impact of the difficulties facing the profession and the spectre of a
18 diminishing supply of accounting expertise prompted some to counsel caution and suggest a
19 more judicious and strategic approach to utilizing available personnel. A week later, on 28
20 November 1941, a third meeting was convened to consider the future of the Register and
21 concluded that the need for utilising qualified personnel to carry out routine tasks may have
22 passed but that there was still the possibility of retaining service at senior levels. This
23 effectively set the agenda for the remaining tenure of the Register. The period in which a
24 substantial and sustained effort was needed as the government, at a time of national
25 emergency, placed the armed services on a more effective, efficient war footing had all but
26 passed by the end of the first 15 months of operations. Although the Register continued
27 operating for at least another 36 months, the second phase was characterised by a switch in
28 focus to personnel placement and a reduced provision of voluntary services. No formal
29 reporting was prepared by the Register in the post-1941 period.

30
31 From early-1941 the Directorate of Voluntary Services in the department of Defence
32 Coordination maintained ongoing contact with the Register, monitoring all voluntary
33 accounting services consumed by government. A series of brief reports prepared indicated
34 1,993 hours provided by the Register in Victoria in September to Navy, Army, Air, Auditor-
35 General (Contracts Board) and Supply and Development, and 2,525 hours in October to Air
36 and Navy (Director of Voluntary Services, Department of Defence Co-ordination,
37 Melbourne. NAA: A663 O130/2/1067, 1099, 1228). Activity in Air and Navy was reported
38 by the Directorate of Voluntary Services for each of November and December 1941 and

2
3 January 1942, although hours used have not been discovered. No further Directorate of
4 Voluntary Services reports are available for the remaining period. The Minute Books of the
5 Commonwealth Institute of Accountants, Federal Institute of Accountants and the
6 Australasian Institute of Cost Accountants include some references to continuing voluntary
7 work but they are brief and provide no further detail other than the statistical information
8 reported by the Directorate of Voluntary Services.
9

10
11
12
13 The scaling back of voluntary service by the Register coincided with a significant
14 increase in the need to identify personnel to fill remunerated positions within government. As
15 one of the initial tasks this had been a secondary issue for the Register in its early stages.
16 Increased activity levels were reported in 1942 by the Commonwealth Institute of
17 Accountants when it noted that the 'Public Service Inspector's Office was in constant touch
18 with the Secretary and during the past year obtained from him information which admitted of
19 appointments to the various Departments being made promptly' (Commonwealth Institute of
20 Accountants General Council Minutes 1941, Minute No. 24, p. 4). For the first time the
21 identification of personnel for full-time appointment had become the predominant role of the
22 Register, driven by an extraordinary demand on the part of government to fill roles as the
23 economy, and particularly the munitions industry, was scaled up to levels not previously
24 envisaged. This pattern continued until late-1943 when the government introduced new
25 Manpower Regulations that ceded to the Directorate of Manpower control over all
26 occupations and trades including, for the first time, accounting.
27
28
29
30
31
32
33
34
35
36
37

38
39 Despite some residual activity, the tenure of the Register effectively came to an end in
40 late-1944. This reality was acknowledged for the first time by the Federal Institute of
41 Accountants when it noted that 'the original purpose ... had ceased to exist, and an attempt
42 should be made to obtain the records relating to members of the Institute' (Federal Institute of
43 Accountants Executive Committee, Minute Book, 1944). The Institute of Chartered
44 Accountants in Australia came to a similar conclusion by confirming that 'work is practically
45 completed and that provision for the disposal of the records and assets of the Register would
46 also be made' (Institute of Chartered Accountants in Australia National Committee, Minute
47 Book Volume VIII, 20 November 1944, Minute No. 3284, p. 759). The proposals as put by
48 the Federal Institute of Accountants and the Institute of Chartered Accountants in Australia to
49 retrieve member-related information, dis-establish the Register and arrange for the disposal
50 of all possessions brought the operation to finality [17].

Discussion and concluding comments

1
2
3 The unique nature of the Register of Accountants for National Service in a time of
4 national emergency lies in the method of its creation, the way in which it was managed, the
5 number and commitment of members who volunteered, several strategic decisions taken
6 during its existence and possible legacies it created. The existence of the Register emphasises
7 the preparedness of a group of individuals drawn from a profession previously riven with
8 discord, disunity, resentment and mistrust who were able, through strong leadership, to put
9 aside at a time of war the rancour that had bedevilled the profession in the two decades
10 leading up to the outbreak of war. Encouraged by the prime minister at the time, the leaders
11 of each of the participating accounting institutes put aside these differences and, in so doing
12 brought together, under one agency, a resource that would be of great value to the Nation.
13 The intervention of the accounting profession in the months prior to the outbreak of
14 hostilities acknowledged an awareness of the precarious state of readiness within the
15 government bureaucracy and a willingness to help relieve some of the pressure that was
16 building on government department officials as they sought to bring the economy onto a fully
17 functioning war-footing. The Register is an important event in Australia's journey through
18 the war years as it was conceived at a time when the country was ill-prepared for war (Long,
19 1952; Mellor, 1958; Horner, 1996; Grey, 1999, 2001; Andrews, 2001; Palazzo, 2001;
20 Stephens, 2001; Stevens, 2001).

21
22 The Register was not only a response to a dilemma confronting government officials
23 but also senior officers of the accounting institutes whose members sought to render service
24 to the Nation. As a natural progression of earlier moves dating from early 1938, it was a
25 rational approach to organising the available resources for maximum benefit of the Nation.
26 Fortuitously, the profession had planned early and the Register was brought into operation in
27 a timely manner. In the absence of a properly coordinated effort by either the government or
28 the profession, valuable, useful individual service might have been rendered, but the
29 advantage derived from a disparate and potentially disorganised resource would have been
30 limited.

31
32 The day-to-day operation of the Register was founded on rational principles as the
33 Committees sought to optimize the matching of expertise to departments. This was achieved
34 by firstly canvassing membership of the profession via survey to ascertain availability for
35 service and the skill sets on offer. Secondly, an extensive Classification of Accountancy
36 Services using industry as the primary means of differentiating experience and expertise was
37 developed. This approach presumed accounting skill sets within industry groupings to be
38 homogeneous and readily transferable within industries but not necessarily between

1
2
3 industries. Descriptions based on functional expertise of different costing systems, pricing,
4 inventory management, payroll record-keeping and machine-accounting could have been an
5 alternative approach to take. Although this was not considered when developing the
6 Classification, the survey elicited details of experience with costing and machine accounting.
7
8 The functional approach, in a limited way, constituted a third dimension to coding when
9 questionnaires were processed.

10
11
12
13 Success of the Register can be judged in several ways. In the first instance it was
14 organised and well led from within the ranks of the Commonwealth Institute of Accountants.
15 A strategic approach to planning was adopted utilising detail developed in the Classification,
16 data collected via survey from members and departmental needs that had been identified. In
17 this way the Register was able to target expertise to where it was desperately needed by
18 matching, wherever possible, needs with expertise. Rather than providing personnel
19 to only carry out mundane tasks, the Register sought to utilise to the fullest extent possible,
20 the experience and specialist knowledge embedded within the membership that had registered
21 for service. It responded to a desperate need for short term work to overcome backlogs and
22 improve efficiency by marshalling a large cadre of personnel for voluntary service in a range
23 of government departments and agencies. In quantitative terms, the Register achieved
24 impressive outcomes. Overall 22% of the total membership was marshalled to serve. This
25 measure would be significantly higher if those already in government service or enlisted in
26 the armed forces could be identified to determine actual available members. The quantum of
27 hours delivered by the Register was similarly impressive. More than 31,000 hours were
28 delivered on tasks that were classed as completed and an additional indeterminate amount of
29 ongoing works in progress were reported at the end of the first reporting period to the end of
30 June 1941.

31
32
33
34 As a well-functioning war time bureaucracy emerged from the earlier difficulties, the
35 need for voluntary services that was the staple of the first fifteen months of operation of the
36 Register abated. As the needs of government changed so too did the focus of the Register. A
37 transition occurred as the major focus moved from provider of mass voluntary services to, in
38 the context of the time, a recruitment agency of exceptional reach. In response, senior
39 officials at the Register were quick to shift their attention to a secondary brief that had been
40 given by the government at the outset: the supply of accounting personnel into full-time
41 remunerated roles. The Register was so successful in delivering this later role that it started to
42 compromise the capacity of the profession to fulfil its role in the wider commercial world.
43
44 The gravity of the situation was noted by the Chairman of the General Committee who

1
2
3 reported 'a serious drain on commercial houses and practising firms' (Letter, C.B. Harvey,
4 Chairman of the General Committee of the National Register of Accountants to Lieut.
5 General Sir Carl Jess, Chairman Manpower Committee, Department of Defence
6 Coordination, 26 March 1941, NAA: A663 O130/3/708). This role remained with the
7 profession through the Register until the middle of 1943 when regulatory changes saw the
8 transfer of responsibility for the sourcing of accounting personnel for fulltime civilian service
9 to the Directorate of Manpower Services. By this time the urgency that had bedevilled
10 defence realm departments had been successfully addressed. While there are no benchmarks
11 against which to compare and judge the contribution made, the very nature of the services
12 provided, often at a strategic level by senior members of the accounting profession, had an
13 important positive impact on the war effort. Consistent through this period of change was the
14 final objective where the Register provided, on an as-needs basis, high-level consultancy and
15 advisory services.
16
17
18
19
20
21
22
23
24
25

26 When peace was in sight in early 1944 government requirements moved quickly.
27 Once the Register's usefulness had been exhausted the end was, predictably swift, and it
28 slipped, with little fanfare, into abeyance. As with most special-purpose agencies created in
29 war time no formal *ex poste* assessments were conducted, although the work and success of
30 the Register had not gone unrecognised beforehand. Contemporaneous and reflective
31 accolades recorded by senior public servants recognised that the Register had performed
32 admirably. For example, J.T. Pinner, Commonwealth Public Service Inspector at the time
33 who had worked closely with officials of the Register, noted that the Register and members
34 'have done a wonderful job in assisting the war effort on the Accountancy side' (Letter, J.T.
35 Pinner, Commonwealth Public Service Inspector to F.G. Shedden, Secretary, Department of
36 Defence Co-ordination, 22 August 1941. NAA: A5954 371/22). This vote of confidence was
37 affirmed by T. Trumble, Director of Voluntary Services, who recorded that the Register has
38 made 'a most valuable contribution to the war effort' and provided with an altruistic
39 determination a 'fine record of patriotic service' (Memorandum, T. Trumble, Director of
40 Voluntary Services to Deputy Directors – All States, 1 September 1941. NAA: A663
41 0130/2/699, 16926, 17075). In a similar vein C.G Brown, Chief Inspector, Finance in the
42 Department of Defence Co-ordination, referred to the 'excellent voluntary service' that had
43 been provided and alluded to the fact that 'sufficient prominence [was seldom given] to the
44 security the public must necessarily feel when they know that the Service Departments, in
45 their accounting transactions, are receiving the help and advice of members of the
46 Accountancy profession' (Closing comments, Conference, 21 November 1941. NAA: MP508
47

3 236/702/109). High level appreciation was also recorded with the prime minister paying
4 'tribute to the splendid voluntary work that had been performed by accountants anxious to
5 assist in the war effort'. (R.G. Menzies, Prime Minister, File Note, 12 October 1940. NAA:
6 A663 0130/2/656). Thus, the total effort mustered by the Register produced not only
7 important outcomes for government, and by extension the Nation, but also for the profession
8 itself.
9

10
11
12
13 In 'producing concrete, meritorious outcomes' (Suchman, 1995, p. 588), as evidenced
14 by the positive reflections noted above, the precisely targeted contribution had further
15 enhanced the profession's standing within society. The means by which the profession
16 offered its services and the model of delivery, mostly costless to the country, conveyed
17 commitment and service to the Nation and in the early days of the war it also provided an
18 opportunity for service for members who had yet to enlist for home or active service [17].
19 Collectively the contribution enabled the profession to convey what Carr-Saunders and
20 Wilson described in their seminal 1933 work as an important attribute of a profession, a
21 'sense of philanthropy [altruism]' (p.472). Not only was the profession and its members
22 demonstrating a willingness to act in the public interest but they were also adopting a socially
23 responsibility approach to service; behaviour which would also enhance professional
24 standing in the eyes of the community. In this way, 'a sense of occupational honor through
25 doing the public good' was achieved at this time of national crisis (Hughes, 1958, cited in
26 Van Maanen and Barley, 1984, p. 302).
27
28
29
30
31
32
33
34
35
36
37

38 The activities of the Register also provided opportunities for members to act
39 individually in a voluntary capacity. Musick and Wilson's (2008) six different motivators of
40 this type of behaviour as articulated in their 'volunteer functions inventory' is particularly apt
41 and provides further explanation as to why this initiative was ultimately successful. These
42 include 'values [construed as] doing something for a cause', developing an 'understanding –
43 through personal growth and ego enhancement that provides a feeling of importance' and
44 personal 'enhancement – the offer of learning experiences and to advance one's skills' (pp.
45 56-63). Each provided strong incentives for members to be involved.
46
47
48
49
50

51 The Register is important in the history and development of the accounting profession
52 on several levels. Most importantly, the motivation of those who eventually served with the
53 Register confirmed their sense of duty and, most significantly, professionalism in times of
54 great stress, not only for themselves but also for the Nation. In the longer term, although not
55 the conscious, determining objective of national service at a time when everyone's future was
56 in obedience, the Register was a well-conceived, effective means by which the accounting
57
58
59
60

profession was able coincidentally, in the best interests of the Nation, to enhance the legitimacy it enjoyed within the business community and wider community generally. It was at once a contribution made sacrificially but at the same time the profession arguably reaped an important dividend; enhanced legitimacy and standing within society.

As a first provider of voluntary services, accounting was an exemplar at the forefront of the professions at the time. The achievements made by the Register are significant in the history of accounting in Australia as they arguably helped to pave the way for a long period of, albeit competitive, cooperation by the major players in the profession in the second half of the twentieth century. Finally, and most importantly at a national level, the Register of Accountants for National Service and the members who volunteered played a vital role in the wider war effort and as one instrument of final victory contributed significantly to Australian society.

Notes

1. Australia is a federation of six states, two territories and a central government, referred to at the time as the Federal Government.
2. Included in the defence realm were Defence, Defence Co-ordination, Army, and Navy.
3. No evidence was discovered in the archive or reported in official histories of the war effort (e.g. Hasluck 1952, Butlin 1955, Butlin and Schedvin 1977) of any similar initiative by other professions.
4. Other countries include Australia, Canada, France, Germany, Ireland, Italy, Spain and the Soviet Union.
5. Gulf War 2 includes Operation Enduring Freedom – Afghanistan 2001 to 2014 and Operation Iraqi Freedom – Iraq 2002 to 2011.
6. For example: in the functionalist domain, Carr-Saunders & Wilson 1933; Greenwood 1957; Parsons 1959, Ritzer 1963 and Barber 1963; in the interactionist domain Becker et al 1962; Haug & Sussman 1963; Roth 1974 and in the critical domain Larson 1977; Klegon 1978 and Parkin 1979.
7. The third attempt (1922-1928) that proved successful in 1929 followed two earlier unsuccessful attempts, one by the Incorporated Institute of Accountants in Victoria (later Commonwealth Institute of Accountants) in 1904-1906 and a later attempt by the Australasian Corporation of Public Accountants in 1906-1914. Each of these attempts caused long-standing bitterness and resentment within the profession based primarily around the practitioner – non-practitioner divide, and the Melbourne - Sydney geographical divide (Poullaos 1994).

8. The offer by the Commonwealth Institute of Accountants is the only one known amongst the accounting bodies. Others may have made similar offers and held similar sentiments, but none have been discovered in the archive and nothing is referenced in the negotiations that followed.
 9. C.G. Brown, Chief Inspector of Finance of the Department of Defence Co-ordination; Department of the Army - Colonel Fordyce, District Finance Officer, 3rd Military District Melbourne and Colonel S.B. Holder, Chief Accountant AIF; Department of the Navy - F.H. Smith, Assistant Director of Naval Accounts.
 10. Commonwealth Institute of Accountants - A.A. Fitzgerald – President, C.W. Andersen – Registrar; Institute of Chartered Accountants in Australia - A.H. Outhwaite (as alternate of the president Sir Gordon Mason Allard) and J.R. Fullarton – Registrar; Federal Institute of Accountants - E.L. Wilson – President, G.T. Moore – Registrar; Association of Accountants of Australia (Inc) - R. Kinsman – President, C.W. Parkinson – Registrar; Australasian Institute of Cost Accountants - J.E. Morton – General President, J.R. McKenzie – State President, M.G. Roberts – Registrar.
 11. The decision to engage with five accounting associations only, had its genesis in the earlier decision to appoint the Accountancy Panel in the Department of Supply and Development. F.G. Shedden, Secretary of the (then) Department of Defence (where the panel was initially proposed before the establishment of the Department of Supply and Development) had engaged in a series of personal communications with a long-time friend H.J. Trist of H.J. Trist and Stranger, Chartered Accountants, Sydney between December 1938 and February 1939. Shedden sought advice about the standing of the various accounting bodies and they eventually settled on the five institutes that were invited to nominate members to the panel in March 1939. The extensive personal correspondence between Shedden and Trist was lodged by both parties with the wider departmental documentation and is retained by the National Archives of Australia at serial A594, 972/1.
 12. There is no evidence to suggest than any system of recording this activity was ever developed and so it is impossible to estimate the level of magnitude of the services provided or fees paid under this category.
 13. This was the first and only occasion when registration numbers were officially reported by the Register. Membership of the participating institutes in 1940 was as follows:

Accounting body	Membership	Source
Commonwealth Institute of Accountants	5,000 (estimate)	Based on 4,300 known in 1938
Federal Institute of Accountants	5,936	CPA Australia Archives File: FIA003
Australasian Institute of Cost Accountants	600	CPA Australia Archives File: AICA001

Institute of Chartered Accountants in Australia	2,700 (estimate)	Based on 1934 Membership Booklet
Association of Accountants of Australia, Inc.	unknown	
Estimated total membership	14,000	
Registrations	3,070	
Registrations as a % of estimated total membership	22%	

14. Curiously Department of the Navy is not included at this point although there was considerable activity within Naval establishments in Sydney. A similar situation occurred with regards to Department of Air / Royal Australian Air Force. The hours reported are lower than actual as hours contributed to the administration and audit of Officers' and Sergeants' messes and Other Ranks' clubs and canteens have not been included. At its peak the Register was servicing facilities on at least 44 air stations in all states except Tasmania.
15. C.B. Harvey, chairman of the Central Committee (Institute of Chartered Accountants in Australia), A.A. Fitzgerald (Commonwealth Institute of Accountants), J.E. Morton (Australasian Institute of Cost Accountants), E.L. Wilson (Federal Institute of Accountants) and C.W. Andersen (General Registrar) represented the Register. Government was again represented by C.G. Brown, F.H. Smith and Col. S.B. Holder. H.C. Elvins and Flight Lieutenant L. Schofield represented the Department of Air and J.T. Pinner - Public Service Inspector represented the Commonwealth Public Service Board.
16. A limited form of conscription was introduced in Australia in November 1939 where unmarried, 21year old men were called up for three months training in the Militia (home defence). Militia personnel were not able to transfer to 2nd AIF (the de facto full-time Army – expeditionary force) nor were they allowed to serve overseas. After the declaration of war against Japan in December 1941 when the Nation came under direct threat of invasion, enlistments in both the Militia and 2nd AIF increased significantly. In May 1942 the voluntary transfer of Militia personnel to the 2nd AIF was permitted and in January 1943 the Militia were permitted to service overseas (defined as the near islands to the north and north-west of the continent – the South West Pacific Zone) (Hasluck, 1952; Dennis et al, 2008). Through this period larger numbers of members of the Register continued to enlist in all branches of the defence forces or were employed in full time positions in government departments and agencies. Membership of the Register did not afford an opportunity to avoid conscription
17. There is no evidence to suggest these documents have survived in the archives of either CPA Australia or Chartered Accountants Australia and New Zealand.

FIGURE 1: QUESTIONNAIRE

REGISTER OF AUSTRALIAN ACCOUNTANTS FOR NATIONAL SERVICE

(1) SURNAME _____ CHRISTIAN NAMES _____
(BLOCK LETTERS)

(2) BUSINESS ADDRESS _____

(3) PRIVATE ADDRESS _____

(4) BUSINESS TEL. No. _____ (5) PRIVATE TEL. No. _____

(6) DATE OF BIRTH _____ (7)* MARRIED OR SINGLE

(8)* NATIONALITY: BRITISH, NATURAL BORN BRITISH, NATURALISED FOREIGN

(9)* STATE OF GENERAL HEALTH: GOOD BAD INDIFFERENT

(10) ARE YOU A MEMBER OF NAVY, A.I.F., MILITIA, AIR FORCE, OR RESERVE OF SUCH FORCES, STATING RANK, OR HAVE YOU ANY OTHER OBLIGATION FOR NATIONAL SERVICE?

(11) PROFESSIONAL QUALIFICATIONS, DEGREES, DIPLOMAS, ETC.:

(12) PROFESSIONAL OR BUSINESS POSITION, GIVING PERSONAL STATUS, ALSO NAME OF FIRM OR EMPLOYER WHERE ENGAGED OR LAST ENGAGED. (It would assist the classification of services offered if you would give brief details of your professional or business career and experience.)

(13) INDICATE ANY CLASS OF BUSINESS OR ACCOUNTANCY AND COST ACCOUNTANCY OF WHICH YOU HAVE SPECIAL KNOWLEDGE:

(14) HAVE YOU EXPERIENCE OF MECHANICAL ACCOUNTING? IF SO, GIVE BRIEF DETAILS:

* Insert cross in appropriate square.

PLEASE INDICATE AVAILABILITY ON REVERSE SIDE

HONORARY SERVICES

- (15)* ARE YOU AVAILABLE FULL TIME OR PART TIME
- (16) IF AVAILABLE PART TIME ONLY, STATE THE MAXIMUM NUMBER OF MORNINGS, AFTERNOONS OR EVENINGS PER WEEK DURING WHICH YOU WOULD BE PREPARED TO SERVE REGULARLY.
 MORNINGS AFTERNOONS EVENINGS
(Attendances at the appointed place must be personal and regular.)
- (17) INDICATE IN THE TABLE BELOW THE SESSIONS WHICH COULD BE ALLOTTED TO YOU, GIVING AS WIDE A SELECTION AS POSSIBLE.
(If for example you can be available "any two" mornings, afternoons or evenings, write in the table "any two." If you are available for two sessions only, mark by crosses three or more sessions from which a selection can be made. If, however, you are available Monday and Thursday evenings only, insert crosses in the appropriate spaces. The object of this question is to allow as much elasticity as possible in the allotment of work.)

	MORNING 9.30 A.M.-1 P.M.	AFTERNOON 2 P.M.-5.00 P.M.	EVENING 7 P.M.-10 P.M.
MONDAY			
TUESDAY			
WEDNESDAY			
THURSDAY			
FRIDAY			
SATURDAY			
SUNDAY			

- (18) IF YOU ARE NOT AVAILABLE IMMEDIATELY, AND WILL BE AVAILABLE AT SOME FUTURE DATE, INDICATE SUCH DATE _____

REMUNERATED SERVICES

- (19) IF YOU ARE WILLING TO CONSIDER AN OFFER OF A FULL TIME, SALARIED POST, INDICATE
